

Crow Canyon Guidelines for Infectious Illnesses & Diseases

Introduction

Crow Canyon's campus remains closed to drop-in visitation. Appointments may be arranged in advance. Contact us at info@crowcanyon.org.

Risks are an inherent part of our programs, and a culture of preparedness and operational safety is fostered at Crow Canyon. The Center discourages employees and visitors who are sick with a contagious illness or disease from participating in programs and encourages them to recuperate at home until no longer contagious. This guidance document outlines recommendations for safeguarding the health and well-being of all staff members, contractors, and participants while ensuring the Center's ability to maintain essential operations. Staff, volunteers, partners, and guests alike are encouraged to address and discuss any real or perceived safety risks.

Infectious Illness and Disease Examples

Several common examples of infectious illnesses and diseases are the common cold, influenza, RSV, strep throat, pneumonia, and COVID-19. Please note that this list is not exhaustive; therefore, the guidelines listed below should be followed for any infectious illness or disease.

Infectious Control Measures

- If you contract an infectious illness or disease, you are asked to stay home and may be asked to leave a program.
- Do not participate in programs if you are running a fever, experiencing symptoms, or if you think you might be contagious.
- Masking on campus or in vehicles is not required; however, anyone who wishes to wear a mask may do so at any time.
- Seek medical attention if needed.
